Lab: Remake Your Index Page

3 min to complete · By Brandon Gigous

Use what you learned in this section to flesh out your `index.html` template with a navbar.

Learn by Doing

Inheritance

Remember your friend, inheritance? You learned about that in terms of templates, so make sure you *extend* your `index.html` template with another template! Be sure to refer to our Inheritance FAQ from this section in case it comes in handy!

Welcome Message

You had a welcome message in your index page. Keep it! Just make sure it looks right now that Bootstrap is "in the house" so to speak. Hint: use a *block*!

Your overall `index.html` need not be more than 10 lines. If it is, go back and look at the other examples again and it should all make sense.

Coming Up

Your templates are looking like real webpages! Great job. In the next section, you'll learn about errors and how you can prepare some professional-looking error pages in place of the standard ones.
